eXo | PLATFORM 4

THE ENTERPRISE SOCIAL PLATFORM

eXo Platform 4 is open-source social-collaboration software designed for enterprises. eXo Platform lets companies deliver connected and collaborative user experiences securely to their employees, customers and business partners. With its easy control of interaction and social collaboration, eXo Platform 4 is built on a robust and highly extensible foundation. Complementary collaborative applications are fully integrated with a social layer designed for efficient communication and maximum productivity.

SOCIAL INTRANET

eXo Platform 4 is an out-of-the-box social intranet solution that integrates rich collaboration, document management, wikis, forums and calendars, all integrated around activity streams, social networking and collaborative spaces. In addition, eXo Platform 4 has very strong web content management, from creating and storing documents and articles to publication processes.

EXTENSIBLE PLATFORM

eXo Platform 4 is more than just a social intranet application. It is a platform designed to provide a flexible and extensible environment that can evolve with your business needs. One of the biggest advantages of eXo Platform 4 is that you can customize it, enhanced by its extensibility via APIs, plugins, extensions and a built-in IDE.

ENTERPRISE GRADE PORTAL

eXo Platform is the presentation layer of your enterprise's information system, aggregating content and services from different sources into a unified web portal and for mobile devices. eXo Platform 4 is built using enterprise standards, such as Java EE, WebDAV, CalDAV, JCR and CMIS, to maximize its interoperability with your existing IT assets. Also, eXo Platform can integrate with enterprise directories (like Active Directory and OpenLDAP) and support the main single sign-on solutions like CAS, OpenAM and SPNEGO.

EXO CLOUD

eXo Platform can be installed on premises, but it is also available on the cloud through eXo Cloud: a social intranet as a service, which can be accessed instantly, at anytime and from anywhere. In a few clicks, you can create a workspace for your company, exploring and freely using the features of the platform without any IT hassle. eXo Cloud takes care of everything and provides you with a secure, robust and highly available service.

About Us

eXo offers a set of user experience services and is committed to open standards. Starting out as an open-source project in 2002, eXo became a company in 2003 and rapidly became a global company, with U.S. headquarters in San Francisco, California, global headquarters in France, and offices in Tunisia and Vietnam. The company has established technology leadership and proven value with a large European installed base.

Our Ecosystem

We have a rich network of certified systems integrators, resellers, distributors and OEM and ISV partners, whose products and professional services help customers succeed with eXo technology.

FEATURES

EVERYTHING YOU NEED IN A SINGLE PLATFORM

ENTERPRISE SOCIAL NETWORKING

eXo Platform can easily be used to build and develop a social network in a controlled way. You can personalize your own avatar, job title, contact details, skills and background using Profiles. By connecting to other people, you will receive updates of important events from your connections and even your team, such as shared links or documents or just moods through activity streams.

COLLABORATION

Rich collaboration features, such as wikis, forums, calendars and documents, are fully integrated around activity streams, social networking and workspaces and they will instantly engage users. You can create workspaces for teams or projects, so they can share documents, tasks, events, wikis and more. Wikis that come with easy-to-use templates, WYSIWYG, search, cross-linking and more can be used to create a knowledge base or procedures for your enterprise. And if you want to collect ideas or answers quickly, the full-featured forum application is what you need.

DOCUMENT MANAGEMENT

eXo Platform 4 is also a full-featured enterprise content management system, which allows you to upload, preview, share and edit files remotely via WebDAV. More advanced document management capabilities are also available, including versioning, metadata and digital asset management.

WEB CONTENT MANAGEMENT

eXo Platform 4 has inherited strong capabilities for managing and developing websites from its portal platform roots. By leveraging a standard content repository via the JCR or CMIS APIs, developers can very easily design content structures and how they will render on your website. A powerful back-office application lets you classify, search, edit and publish web pages very easily. And if you need to engage your visitors, simply use the front end by creating and publishing an article, taking part in a forum discussion or writing a wiki page, all in a few clicks.

UNIFIED SEARCH

A single interface is used to search for all types of content, including documents, events, tasks, posts and articles. Any content can be found with this clear, powerful and simple search. If you want the most relevant results, use the advanced search to go further.

PRODUCTIVITY

eXo Platform 4 adds value to your corporation. Using gadgets in a dashboard, you can track metrics, feeds, statuses and analytics. You can easily personalize your dashboard by dragging and dropping gadgets to any desired position. You will never miss anything with calendars, reminders and invitations. You can schedule tasks or events in your calendar so that reminders will be sent to you, and you can even keep track of other people's tasks via activity streams.

EXTENSIBILITY

With our standardized runtime portlet and gadget containers, developers can deploy their own apps beside the built-in ones. The Web IDE extension helps you develop and deploy gadgets and REST services at runtime. Standard APIs, such as JCR and CMIS, are complemented by a set of Java and REST APIs, which can be used to tailor spaces, activity streams, polls, posts, wikis and more for your organization model.

MOBILE

Work and collaborate on-the-go through native iPhone, iPad and Android apps that can be connected easily and securely with your eXo instance. You can follow the latest updates from your colleagues and groups, interact with your personal dashboards, browse and edit your files, and more – at anytime, from anywhere.
